

CAVSWAB™ ANTERIOR NARE

CavSwab™

The MedSchenker® Anterior Nare CavSwab™ with Allium™ flock technology has been engineered with a precision scalloped surface to produce 'cavums.' This design creates a greater surface area to absorb and help collect larger amounts of specimen.

Allium™ flock technology refers to the unique ability of our nylon fibers to adapt to the direction the swab is being pushed/pulled, resulting in less friction and an overall more pleasant experience for both the medical professional and the patient.

The notched 80mm shaft, with no breakpoint, increases grip and dexterity while also reducing the amount of stress on the practitioner. It is the perfect size for rapid and easy collection.

CavSwab™ Anterior Nare

	Package	5000 units per master package
	Tip	Nylon Fiber
	Rod	Nylon
	Size	80mm (no break point)
	Sterility	Electron Beam
	Shelf Life	36 months

*As per CDC, "Use only synthetic fiber swabs with plastic or wire shafts. Do not use calcium alginate swabs or swabs with wooden shafts, as they may contain substances that inactivate some viruses and inhibit PCR testing."

ADVANTAGES

- Precision scalloped surface of 'cavums' provide a greater surface area to absorb and collect larger amounts of specimen.
- Allium™ flock technology - nylon fibers adapt to the direction the swab is being pushed/pulled.
- Notched shaft increases grip and dexterity while also reducing the amount of stress on the practitioner.
- Electron beam sterilized and individually wrapped in pouches to ensure 100% sterility.
