

# SALIVA COLLECTION KIT

An easier and less expensive way to test for COVID-19

## Saliva Collection Kit

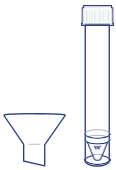

The MedSchenker® Saliva Collection Kit is a complete kit made out of 100% polypropylene.

The funnel has been engineered to be intuitively easy to use and specifically designed to reduce user self-collection error by preventing flowback. It fits seamlessly into our 10ml stand-up conical tube impeding the contamination of the outside of the tube and our CQ-Lock™ screw cap prevents leaks even in pneumatic tubes and centrifuges.

When saliva is captured in a sterile container, COVID-19 is stable at room temperature for up to seven days without the need for expensive reagents. Based on research conducted by Yale University.

For an easier and less expensive way to test for COVID-19, choose the MedSchenker® Saliva Collection Kit.

## Saliva Collection Kit (SCK-KIT)

	<b>Package</b>	500 units per master package
	<b>Material</b>	Polypropylene
	<b>Funnel</b>	Prevents flowback
	<b>Tube</b>	10ml with CQ-Lock™ screw cap

## ADVANTAGES

- ❄️ Maintains the viability of COVID-19, at room temperature, for seven days.
- ❄️ The funnel has been engineered to be intuitively easy.
- ❄️ Designed to reduce user self-collection error by preventing flowback.
- ❄️ Funnel fits seamlessly into our tube impeding the contamination of the outside of the tube.
- ❄️ CQ-Lock™ screw cap prevents leaks even in pneumatic tubes and centrifuges.
- ❄️ Made from 100% polypropylene.
