STAT-NAT[®]: molecular diagnostics made easy

Polymerase Chain Reaction (PCR) is one of the most used methods in the molecular laboratories to detect infections in human patients. PCR workflow can be labor intensive, time consuming and prone to errors, especially when many samples and different parameters should be analyzed simultaneously. Sentinel Diagnostics developed STAT-NAT[®] assays for the qualitative and quantitative detection of infections in human samples.

STAT-NAT[®] is:

SIMPLE

- reagents are stored at **room temperature**
- assays have the **same reaction protocol** and use the **same extraction kit**

ROBUST

- **no need to freeze and thaw** reagents
- makes assay more **robust**
- **automation compatibility** increases the reproducibility

FLEXIBLE

- **3 different formats available** for different laboratory requirements

STAT-NAT[®] assays are available for the following areas:

VIROLOGY

RESPIRATORY
INFECTIONS

PARASITOLOGY

HEALTHCARE
ASSOCIATED INFECTIONS

STAT-NAT[®]: two types of workflow

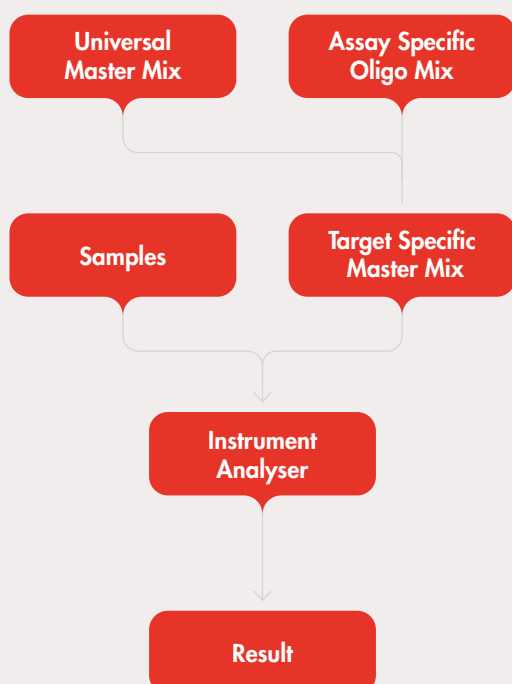

STAT-NAT[®] kits are available in 2 workflows: **OLIGO MIX** and **ALL-IN-ONE**.

In the **OLIGO MIX** workflow, a universal master mix is combined with a specific oligo mix set to set up the PCR assay.

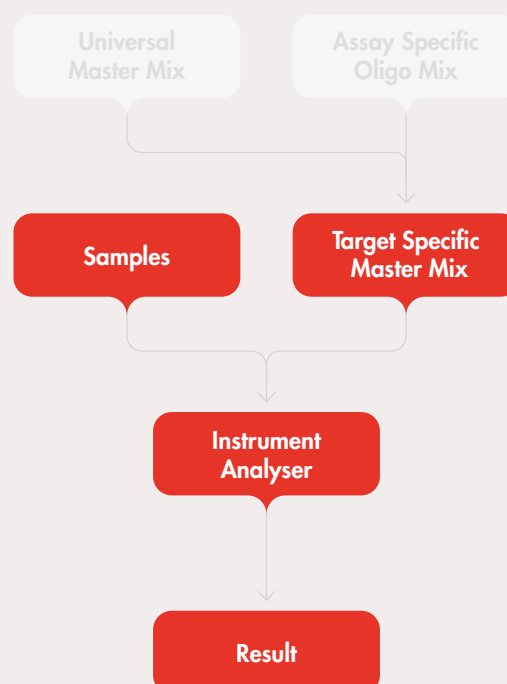

In the **ALL-IN-ONE** workflow, a specific master mix, containing all the components required to perform the PCR assay, is supplied.

In both cases, the sample is added to the PCR set up to run the reaction on the proper instrument.

Oligo Mix Workflow

All-in-one Workflow

Three product lines of STAT-NAT[®] kits are available:

STAT-NAT[®] for manual use

STAT-NAT[®] kits are designed for the **manual use**. They are useful for low throughput requirements. Kits are available in the All-in-one format.

Each kit consist of:

- 6x8-well **strips* pre-filled** with complete master mix, that include both enzymes, dNTPs, MgCl₂, target specific oligos and primers to perform the reaction
- **Buffers**
- Internal **control** and, for the quantitative assays, **calibrators** for the standard curve

Compatible with **STAT-NAT[®] Pathomag** extraction kit.

Kits are **validated** on Bio-Rad CFX96[™] DX and Thermo Fisher QuantStudio[™] 5DX.

* Ref 1N045 STAT-NAT SARS-CoV-2 available on amber glass vials, 288 reactions

** CFX96[™] DX is a trademark of Bio-Rad Laboratories, Inc.

** QuantStudio[™] 5DX is a trademark of Thermo Fisher Scientific, Inc.

Stability at room temperature

- Simplified shipment and storage
- Increased robustness of assays

Prefilled tubes

- Simplified assay set up
- Increased reproducibility

Compatible with third party platforms

- Validated on Bio-Rad CFX96[™] DX** and Thermo Fisher QuantStudio[™] 5DX**

STAT-NAT[®] Flex for semi-automated use

STAT-NAT[®] Flex kits are designed for the semi-automated use. They are useful for low to medium throughput requirements. Kits are available both in the All-in-one and Oligo Mix format.

Each kit consist of:

- Amber glass vials of **freeze-dried master mix** (target specific or universal) and **oligo mix** (to be combined with universal master mix)
- **Buffers**
- Internal and positive **controls and calibrators** for the standard curve (provided separately)

Validated with **SENTiNAT[®] X48 Pathomag Extraction kit**.

Stability at room temperature

- Simplified shipment and storage
- Increased robustness of assays

Flexibility

- Optimized reagents consumption

Multiparametric analysis in the same run

- Common protocol among different targets
- Same thermal profile among different targets

STAT-NAT[®] SN200 for fully automated use

STAT-NAT[®] SN200 kits are designed to be used with SENTiNAT[®] 200 fully automated, sample-to-results system. They are useful for medium to high throughput requirements. Kits are available both in the All-in-one and Oligo Mix format.

Each kit consist of:

- 6 x 16-well miniplates of **freeze-dried master mix** (target specific or universal) or **3 x oligo mix** vials (to be combined with DNA master mix)
- **Buffers**
- Internal and positive **controls** and, for the quantitative assays, **calibrators** for the standard curve (provided separately)

Stability at room temperature

- Simplified shipment and storage
- Increased robustness of assays

Multiparametric analysis in the same run

- Common PCR protocol and extraction kit for different targets
- Same thermal profile among different targets

Automated complete workflow

- Barcoded reagents and consumables for a complete traceability
- Pre-filled miniplates reduce errors and free up operator time
